Instructions for using LI-ION battery charger

Connector type

GW battery

DLG battery

Charger description

Model – STC – 8108LC
Input – 220-240VAC, 50Hz, 140W
DC output – 36V/3A

- Use the charger for charging rechargeable Li-Ion 36V batteries.
- The charger is protected against return current
- The charger is protected against reversing poles
- The charger is protected against over-voltage
- The charger is protected against short circuit

Charger use

- Connect the charger with battery carefully and plug the charger into a socket
- The charger uses constant current and voltage.
- Charging battery to full capacity may last for 4 – 8 hours.
- Disconnect the charger at first after the battery recharging and disconnect the battery then only.
- Two LEDs, green and red, light up after the charger is connected to the mains.
- The charging process starts after the battery is connected and both LEDs light-up red.
- One LED is green again after the battery is 100% recharged.

Warning

- Keep charger away from children and pets.
- Charge the battery in a dry environment to avoid short-circuit damage.
- Do not cover the battery or the charger at charging up.
- Do not leave the battery connected to the power source constantly .
- Use the charger only to charge the battery.
- Do not disassemble or modify the battery cover.
- Do not throw the battery into fire or expose it to extreme temperatures.
- Do not use the charger when it is visibly damaged. It may lead to its destruction.
- Do not use solder for direct connection of the battery or cables, because bursting or inflammation may occur.
- Do not try to deform the charger or modify it in any way.
- Do not expose the charger to impacts or vibrations.
- Do not insert metallic objects into the charging socket, because overheating, bursting or inflammation may occur.
- Contact your seller in case of uncertainties or suspicious behaviour of the charger
